

Executive Board and the Reference Committee, I've tried to say the same thing. I ask your consideration for this. As Senator Beutler pointed out, he felt this was in a gray area. The gray area is that we need to understand the medical concerns. It comes in the section that has to do with anatomical gifts. It has to do with the part of the body that cannot be substituted any other way. It would be a source of supply for a very needed substance. Senator Chambers' concern for the rights of the individual will be heard, will be evaluated. But the main overriding concern, as I see it, is the medical concern relating to this particular issue. I urge your support for Senator Wesely's motion.

PRESIDENT: Senator Chambers, do you wish to speak again?

SENATOR CHAMBERS: Mr. Chairman and members of the Legislature, Senator Marsh said it's too bad you have to discuss the merits of a bill at this point in consideration. But she really wanted the opportunity in the same way that Don thought he could gain votes on his side by making it appear an Ernie situation. Senator Marsh felt that she could gain votes by talking about dwarfism and the other medical conditions that could be dealt with, should this bill pass, by saying the doctors and the medical association and all those people want it. That is totally irrelevant to what we are talking about here. We are not saying whether the bill is good, bad or anything else. We are considering whether, based on its subject matter, it ought to be referred to the Public Health Committee or to the Judiciary Committee. Before you can even get to the things that Senator Marsh is talking about, once you can get past the things that Senator Wesely talked about in terms of Ernie Chambers, you have to look, if you can, at what we are discussing. This bill deals with legal issues, with legal rights. How those issues will be resolved would be determined partly in the committee, and maybe ultimately out here on the floor of the Legislature. The only thing we are talking about now is whether a bill, dealing with legal rights, ought to go to the Judiciary Committee where such matters are handled or, because it has certain words in it such as dwarfism, it should go to the Public Health Committee. I tell you it should not go to the Public Health Committee. It should stay where the Executive Board, acting as the Reference Committee, has placed it which is before the Judiciary Committee.
